**Drink 2 glasses of warm water**

# **CHARGE YOUR WATER BEFORE CHARGE FOR 2 MINUTES BEFORE DRINKING**

## **How good is terahertz water?**

Terahertz water can greatly improve the blood circulation system of the human body.

Increases the water content of cells effectively and the efficiency of communication between cells.  
It can activate and repair cells.

## **Caution:**

**Treatment with iTeraCare is not recommended in:**

- pregnant women and women in menstruation**
- in acute diseases**
- people with congenital heart defects**
- people with implants, open wounds and fractures**

This does not mean that these people should not treat themselves at all. Rather, these people should not treat the areas of health stress.

Example: a pregnant woman should not treat the abdomen, but rather focus on the legs, upper shoulder and chest area, and the head area.

A person with an upper arm fracture should not treat the arm where the fracture is, but should treat the other arm, the back, the legs, and also the head area.
